

APPENDIX B

Public Water Supply District No. 1 of Franklin County Rules and Regulations Effective January 1, 2019

Sewer Rates

Residential customers shall be billed for sewer service based on actual or estimated winter water usage based on water meter readings gathered between the months of October and March. This average winter water use shall be used to compute residential sewer billings each May for the next 12 month period using the following rates:

First 1,000 gallons or less	\$21.93 per month Minimum
For each 500 gallons over 1,000 gals	\$2.60 per each 500 gallons or portion thereof

New customers who have not established average winter water usage shall be billed the sewer only rate (listed below) per month until actual winter water usage has been established. Within 90 days of their actual winter water use being known, any new sewer customer, upon written request, can request review of their account to determine if their actual winter water use was less or more than the average winter water use billed. If their actual winter water use was less or more than the billed average, the difference will be applied to their sewer accounts as a credit or an additional charge, whichever the case may be.

Sewer Charge – Monthly Availability for Non-Water Customers (Sewer Only)

\$39.58 per month minimum (flat rate) based on 4,400 gallon average
